PREFACE

The Philippine Men and Women of Science (PMWS) is an online publication of the Science and Technology Information Institute (STII). The first volume was published in 1964 as the Philippine Men of Science (PMS) featuring one hundred and one Filipino scientists' contributions to the scientific community.

Investigating the physics and chemistry of the globe can help us manage our resources, control pollution, and understand climate change. At present, a growing interest on geological and environmental phenomena on earth helps steer environmental management and environmental impact. From methods and field techniques to chemical and biochemical processes that underlie geology, atmosphere, and climatological processes, massive forces and molecular level aspects bring about changes on earth.

This online biobibliographical publication features researchers on engineering, industry and environmentally-related areas that touch the evaluation of geologic hazards, earth processes, and dynamics. Shrinking the world to the molecular level while looking into interactions on a larger scale help establish a firm grounding in these interdisciplinary fields of study.

The *Philippine Men and Women of Science Volume 33* bring together information on some of our scientists in the field. As a tool, the information presented supports researchers and opens readers to the new face of science in subject areas such as Geology, Geoscience, Biotechnology, Chemistry, Engineering, Material Science, and Physics. If a quick preview is desired, readers can use the authors and specialization indexes.

Our team upholds a continuous, concerted effort that diligently coordinates records. To date, we have persevered in the timeless tradition of ongoing data mining, organization, and communication of facts on productive scientists and researchers in their fields.

We offer our deepest gratitude to our scientists, researchers, partners, and staff who contributed to the completion of this volume.
